

Catalogue: **Park & Playground Equipments**

Category: **Robinia Play Structures**

Code: **PE02327**

### Description:

Multi-game structure made of black locust wood. The black locust poles are debarked and sanded, thus making the finished product soft and natural, perfectly integrated with the surrounding environment. The structure is composed of 3 hexagonal towers (210 x 210 cm) of which: 2 towers with a platform (H 130 cm) complete with a wooden roof and 1 tower with a platform (H 95 cm) in the open air. The play structure is composed of: - Climbing sector with poles fixed to the ground and polyester ropes joined together creating a sort of path to reach the platform (H 130 cm); - Black locust gym and Herkules rope connected to the poles of the tower (L 250 x H 200 cm); - Fixed bridge connecting two towers entirely made of wood; - Fixed wooden bridge with rope parapets connecting two towers; - No. 02 ladders complete with robinia ribs and stainless steel climbing rungs; - Climber ramp complete with climber grips and climbing rope; - Polyethylene slide connected to the platform (H 130 cm); - Stainless steel fireman's pole connected to the tower; - Polyethylene tunnel slide connected to the tower with platform (H 130 cm) - Memory play panel positioned in the lower base of the tower - Tris play panel, positioned in the lower base of the tower. The assembly is carried out with galvanized steel screws, protected with safety screw caps. Overall area: 16 x 9 m. Safety area: 19 x 12 m.

Notes: On request the structure with steel slides

### Notes:

Upon request, the structure with steel slides.
