

Catalogue: **Park & Playground Equipments**

Category: **Wooden Play structures**

Code: **PE02381**

Description:

The "Forest" castle consists of three towers with 9x9 cm posts made of autoclave-treated Nordic pine. One tower has a colored polyethylene roof, while the other two towers have polyethylene appendages that simulate treetops. The towers are positioned at different heights: two towers (both 130 cm high) are connected by a tunnel, and the third tower (95 cm high) is connected by a sloping bridge. The ascent is possible via a ladder, a climbing device, and a spiral ladder. The descent is via a tunnel slide (130 cm high) and a traditional slide (95 cm high), both made of colored, high-resistance polyethylene. The castle is completely finished with screws and caps.

Slide platform height: 95/130 cm

Frame size: 6 x 3.50 m

Safety area: 7 x 9 m
